eptos™ SAP® Interface

Data transfer as one-two-three

Data management and exchange are essential and critical for any company and product. Thanks to a streamlined, automated, and well-established data transfer process, your product will be more successful and of higher quality.

The eptos SAP® interface connects eptos™ with one or more SAP® systems and supports the user in product information maintenance by automatically bidirectionally synchonizing changes from eptos™ to SAP® via the SAP® Interface.

Dictionary Management

An essential component of high-quality information transmission is well-structured and ordering synchronized from both sides. eptos™ SAP® Interface allows you to maintain a dictionary that will compare data from both systems - eptos™ and SAP®, and correctly synchronize information between them. This reduces errors and generally ensures proper data management.

Material Master Data Management

The eptos™ SAP® Interface supports you in creating, maintaining and updating your material master data through rule-based communication between the eptos™ Item Manager and your SAP® system. With the help of eptos™ SAP® Interface, all stages of creation can be fully automated, performed all at once and ensure consistent rule based material description.

Product Information Management

Ensure your product has correct, up-to-date and relevant technical product data. Using the eptos™ SAP® Interface, you will be able to transfer essential information, such as order and production-relevant product characteristics, needed to support business processes, such as pricing, inventory management, stock valuation, procurement control of sub-components, and more.

Benefits

Universal interface

Get an easy and convenient way to create and update classification structures and material master (including rule based short and long texts) from eptos™ in your SAP® system.

Multi-stream data transfer

Regardless of the number of systems that need to transfer or exchange manufacturer and vendor information, the eptos™ SAP® Interface allows you to interact with multiple SAP® systems simultaneously, while maintaining failsafe technical communication, optional using PI/PO.

Product data and more

In addition to the usual data about your products, you can also transfer and synchronize data about your vendors (e.g. vendor related purchase order text and others) between eptos™ and SAP® systems.

Automate everything, synchronize more

Automate not only the essential Material Master creation processes, but also vendor info records in the course of the material master creation. Synchronize material stock locations and stock quantities from SAP® to eptos™.

Features

- Interface for synchronizing SAP® Material Master (MM)
- Interface for synchronizing SAP® Classification (CA-CL)
- Automated data transfer process
- Compatible with many eptos™ modules
- Native SAP® Staging System Imports
- Creation of Vendor records

SAP® is a trademark or registered trademark of SAP® SE.
