eptos™ Terminology Manager

Bring your terminological entries to a qualitatively new level with more in-depth descriptions

Different and inconsistent terminology in the description of products or properties, symbols, spellings and translations makes it much more difficult to understand the descriptive texts, property names and other values across the product.

eptos™ Terminology Manager helps to create and adhere to consistent human centric terminology and translations and also provides a central storage for uniquely identified terminological entries and their representations.

eptos™ Terminology Manager

PARADINE

Dictionary Management

By using eptos™ Terminology Manager you can easily create a library of terminological concepts with many options, such as terminological entries in different languages, with a type (e.g. long form, abbreviation symbol, etc.), a usage status and a technical status from the lifecycle (e.g. draft and released).

Master Data Management

Create a unified, independent terminology within your company as a starting point for a preferred name of an item. With eptos™ Terminology Manager each product description has a set of terminological entries which may be used as alternative names for items in this class assigned, leads to a consistent terminology.

Product Information Management

With our eptos™ Terminology Manager, you have a consistent source for your external communication that is independent of different vendor/ manufacturers/standards. This increases the quality of the data sheets, for which the data is now unified and well organized.

Benefits

Visibility of Conceptualizations

Discover many tools and ways to manage and modify the dictionary such as reference the terminological concept, convenient keywords assignment, properties concept crosscheck and much more.

Support for Translations

Terminological entries are fully translated and with eptos™ Terminology Manager you will discover an easy and fast way of creating translations by using the relevant terminological entries of the language.

Maintenance Workflow

For a newly created or modified terminological concept you will have full control over the workflow for releasing these terminology elements including the usage status.

Versioning and Change History

Be sure, all changes and modifications are recorded and the version history is tracked. All information is in perfect safety.
