eptos™ Dictionary Transformation Manager

eptos™ Dictionary Transformation Manager enables its users to manage products across different dictionaries and releases by mapping classes and properties in alignment with defined business rules and processes as well as managing these mapping plans.

eptos™ Dictionary Transformation Manager

eptos™ Product Master Data Repository

Today, companies deploy a wide range of IT-systems to support business processes and exchange information. One of the critical success factors is the reliable administration and electronic exchange of materials master data, product master data and services master data between systems within the organization as well as to suppliers and customers. Our global markets require the support of increasing numbers of different language versions.

Errors due to misunderstandings, wrong interpretation or translations of words, features or symbols result in high expenses and drive product and service prices.

eptos™ Product Master Data Repositories support companies and organizations to overcome these problems and support the development and provision of corporate wide consolidated and multi-language product master data. Consistent master data will be provided to all connected application systems (ERP, CAx, PDM, eCatalogs, etc.). Consolidated product master data reduces the complexity of your business process.

eptos™ Dictionary Transformation Manager

eptos™ Dictionary Transformation Manager handles plans to map dictionary (classes, properties, values, units, etc.) according to a defined business process and business rules.

Therefore, it supports the easy use of different dictionaries within a company (e.g. internally used dictionary, sales dictionary, supplier dictionary).

eptos™ Dictionary Transformation Manager allows mapping of a local dictionary to (each release) of an external standard (or vice versa) and therefore enables to describe a product based on only one standard in one release. All other standards (and their releases) are derived according to these mappings, avoiding re-occurring efforts to manage products descriptions across the different dictionaries and releases.

Our eCl@ss Competence:

PREFERRED PARTNER
PLATINUM

Features:

The product can

- create and edit mappings plans
- migrate releases of mappings/plans
- manage versions of mapping plans
- perform a completeness check
- import and export mapping plans
- manage conditional mappings
- transform values and
- provide mapping suggestions.

Target group:

eptos™ customers who describe products and services electronically and exchange these descriptions using different formal dictionaries.

Requirement:

- Base Module
- Dictionary Manager
- Classification Manager

Our offer:

- Software-license
- Maintenance and support contract
- Documentation
- Training, workshops and webinars

Reference Implementations:

We are proud that eptos™ solutions are also successfully used by:
